

Incident Response Plan

ALRP Security Operations

Prepared by: SOC & IR Team

Baseline: NIST SP 800-53 Rev. 5 -- Moderate

Classification: Controlled Unclassified Information (CUI)

Status: Draft for pre-adjudication review

1. Plan Purpose

The Incident Response Plan defines how the organization prepares for, detects, analyzes, contains, eradicates, and recovers from security incidents affecting the ALRP. It establishes roles, escalation paths, and reporting obligations for the incident-response lifecycle.

2. Incident Categories

Incidents are categorized by severity according to confidentiality, integrity, and availability impact. Severity determines the escalation path, the notification timeline, and the level of management engagement required.

3. Control Implementations

AT-2 Literacy Training and Awareness

Security literacy ensures that every individual with access understands their responsibilities and the threats relevant to their role.

Role-based security awareness training is delivered to all personnel monthly, with completion tracked in the learning management system.

Curricula are tailored to general users, privileged users, and incident responders, and completion is a condition of continued access.

IR-3 Incident Response Testing

Exercising the response plan validates that people, process, and tooling perform under realistic incident conditions.

Incident-response capabilities are exercised through tabletop and functional tests annually.

Exercises cover detection, containment, eradication, and recovery, and lessons learned feed back into the plan.

IR-6 Incident Reporting

Timely incident reporting satisfies regulatory obligations and enables coordinated response across the enterprise.

Confirmed incidents are reported to the designated authorities daily and recorded in the

incident-tracking system.

Reports follow the severity-based escalation matrix and are delivered through the designated reporting channel.

4. Supporting Controls

IR-4 Incident Handling

The organization handles incidents through a coordinated process spanning preparation, detection and analysis, containment, eradication, recovery, and post-incident activity.

IR-8 Incident Response Plan Maintenance

The plan is maintained as a living document; revisions are distributed to all response stakeholders and incorporated into subsequent exercises.
